

4.5 File Browser

Instructions

Lab: File Browser

Overview

In this lab we're going to explore the protocols of the web by creating a simple website file browser. You'll use some new HTML skills from class and a CSS framework called Pico to create a basic file table with links to various web-accessible file types. You'll also spend some time exploring the behavior of these files within your browser of choice, and reflect on them in your final lab submission.

Requirements

1. Create a new Github repository called `file-browser`.
2. Create a valid HTML file called `index.html` in the root of your repository. This will serve as your main landing page for the file browser site.
3. Add `pico.css` to the `<head>` of your `index.html` file and make
